PHP: CASE - Manual

Unicode. By contrast to the standard case folding functions such as `strtolower()` and `strtoupper()`, case folding is performed on the basis of the Unicode character properties. Thus the behaviour of this function is not affected by locale settings and it can convert any characters that have 'alphabetic' property, such as A-umlaut (Ä).

PHP: mb_convert_case - Manual

Case-folding is defined as "a process applied to a sequence of characters, in which those identified as non-uppercase are replaced by their uppercase

Where To Download Case Manual Php

equivalents". In other words, when it comes to XML, case-folding simply means uppercasing. By default, all the element names that are passed to the handler functions are case-folded.

PHP: Case Folding - Manual

In the beginning, no code is executed. Only when a case statement is found whose expression evaluates to a value that matches the value of the switch expression does PHP begin to execute the statements. PHP continues to execute the statements until the end of the switch block, or the first time it sees a break statement.
