The electrical circuit is a path between higher potential and lower potential. then that circuit is called linear circuit. is called Non-linear Circuit. is called Unilateral circuit. is called Bilateral Circuit. When we connect a number of electrical elements or parameters in any manner then it is called Electric Network. is called Active Network. is called Passive Network.

Electric circuits are classified in several ways. A direct-current circuit carries current that flows only in one direction. An alternating-current circuit carries current that pulsates back and forth many times each second, as in most household circuits. (For a more-detailed discussion of direct- and alternating-current circuits, see electricity: Direct electric current and electricity ...

In this figure shows a simple electric circuit containing. A battery of 30 V; A carbon resistor of  $5\text{k}\Omega$ ; Due to this, a current  $I$ , flows in the circuit and a potential drop of  $V$  volts appears across resistor.. Basic Properties of Electric Circuits. A circuit is always a closed path.
