Epidemiology And Disease Prevention A

In order to identify and resolve illness, the epidemiologist must first identify the problem, detect possible causes of the disease and the disease itself; determine how the illness is spread and finally, classify how people in the community become susceptible to the disease (Nies & McEwen, 2015, p. 70-72; Centers for Disease Control and Prevention [CDC], 2016).

Epidemiology in Disease Control and Prevention

Disease Prevention. Disease prevention is a procedure through which individuals, those with risk factors for a disease or without the risk factors, are treated in order to prevent a disease from occurring. Treatment normally begins either before signs and symptoms of the disease occur, or shortly thereafter.
