Microfabrication is a technique that use semiconductor manufacturing processes such as ion etching, diffusion, oxidation, sputtering etc. in combination with specialized micromachining techniques. This machining occurs in the range of 1-100 micrometers in size, where both the mechanical parts and the electronics that control them are built in the same piece of silicon.

Zone melting (or zone refining or floating-zone process or travelling melting zone) is a group of similar methods of purifying crystals, in which a narrow region of a crystal is melted, and this molten zone is moved along the crystal. The molten region melts impure solid at its forward edge and leaves a wake of purer material solidified behind it as it moves through the ingot.
