System of Crop Intensification Red gram is one of the important pulse crops under rainfed conditions in Kolar district of Karnataka. Usually it is grown as an inter crop in Ragi or Groundnut crop.

### **System of Crop Intensification**

Crop intensification is measured by cropping intensity (CI). In rain fed areas with a short rainy season, you can grow only one crop per year, and the CI is one here. In rain fed areas with a longer rainy season, one main crop is followed by a short duration legume or oil seed crop. Here the CI is 2.0.

industrial agriculture, is a type of agriculture, both of crop plants and of animals, with higher levels of input and output per cubic unit of agricultural land area. It is characterized by a low fallow ratio, higher use of inputs such as capital and labour, and higher crop yields per unit land area.

### **Intensive farming - Wikipedia**

The System of Rice Intensification is a farming methodology aimed at increasing the yield of rice produced in farming. It is a low-water, labor-intensive method that uses younger seedlings singly spaced and typically hand weeded with special tools. It was developed in 1983 by the French Jesuit Father Henri de Laulanié in Madagascar. The system was not fully tested and spread throughout the rice growing regions of the world until some years later, with the help of Cornell University and others.
