However, research is now required towards the next generation of UES where diverse and distributed energy systems are dynamically interoperated through ICT penetration. The authors argue that a system of systems approach is required to successfully orchestrate the interplay between diverse energy components in a way that promotes systemic autonomy, belonging, connectivity, diversity and emergence.

Multi-stage cascade architecture exists widely in many industrial systems such as recommender systems and online advertising, which often consists of sequential modules including matching, pre-ranking, ranking, etc. For a long time, it is believed pre-ranking is just a simplified version of the ranking module, considering the larger size of the candidate set to be ranked. Thus, efforts are ...
